Program 1: Develop a Windows Form Application using Form Control.

```
Public Class Form1
Private Sub Form1_Load(sender As Object, e As EventArgs) Handles MyBase.Load

End Sub

Private Sub btnGreet_Click(sender As Object, e As EventArgs) Handles
btnGreet.Click
If txtName.Text = "" Then
MessageBox.Show("Please enter your name.")
Else
lblOutput.Text = "Hello, " & txtName.Text & "! Welcome to VB.NET."
End If
End Sub
End Class
```

Output:

Fig 1.1 — Initial state of the form with input field

Fig 1.2 — Output displaying greeting message

Program 2: Write a program to demonstrate the use of Button, Label and TextBox. Take two TextBoxes which takes two inputs from the user (name and number) and shows the message box to print the user details when user presses the Button.

```
Public Class Form1
Private Sub btnShow_Click(sender As Object, e As EventArgs) Handles
btnShow.Click
If txtName.Text = "" Or txtNumber.Text = "" Then
MessageBox.Show("Please fill in both fields.")
Else
MessageBox.Show("Name: " & txtName.Text & vbCrLf & "Number: " & txtNumber.Text)
End If
End Sub
End Class
```

Output:

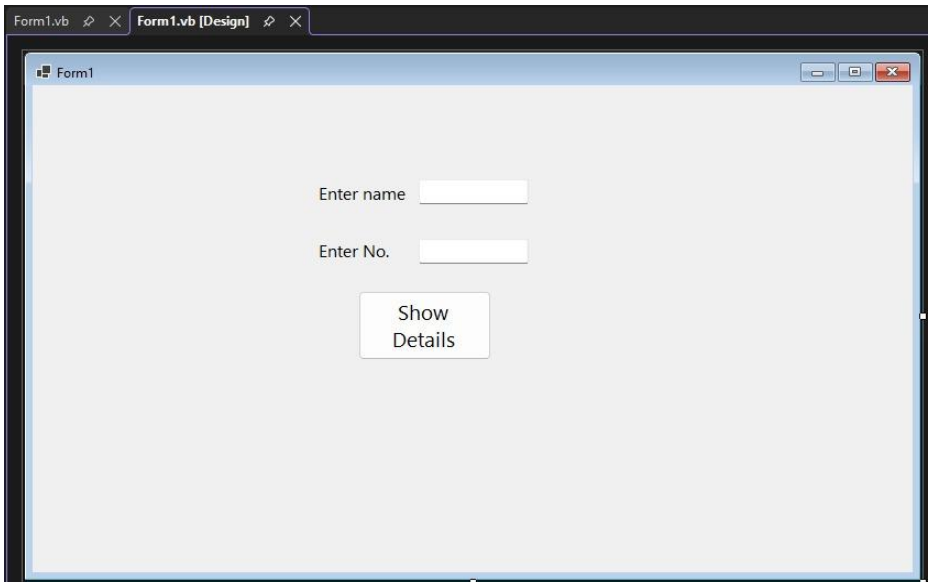

Fig 2.1 — Form design with Label, TextBox and Button controls

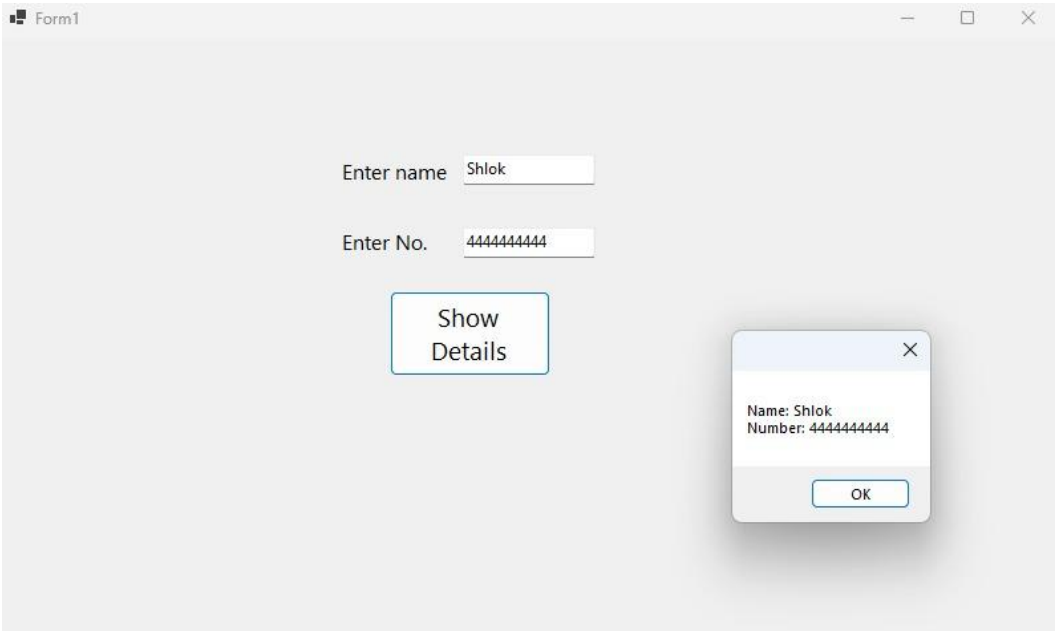

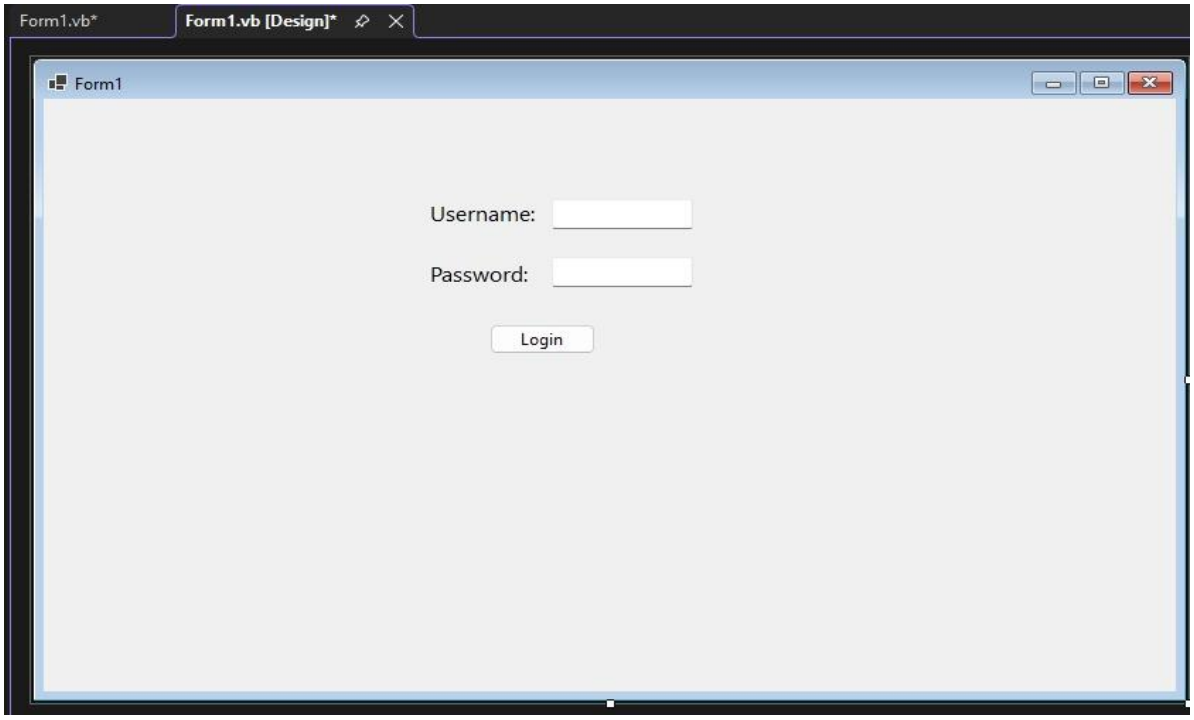

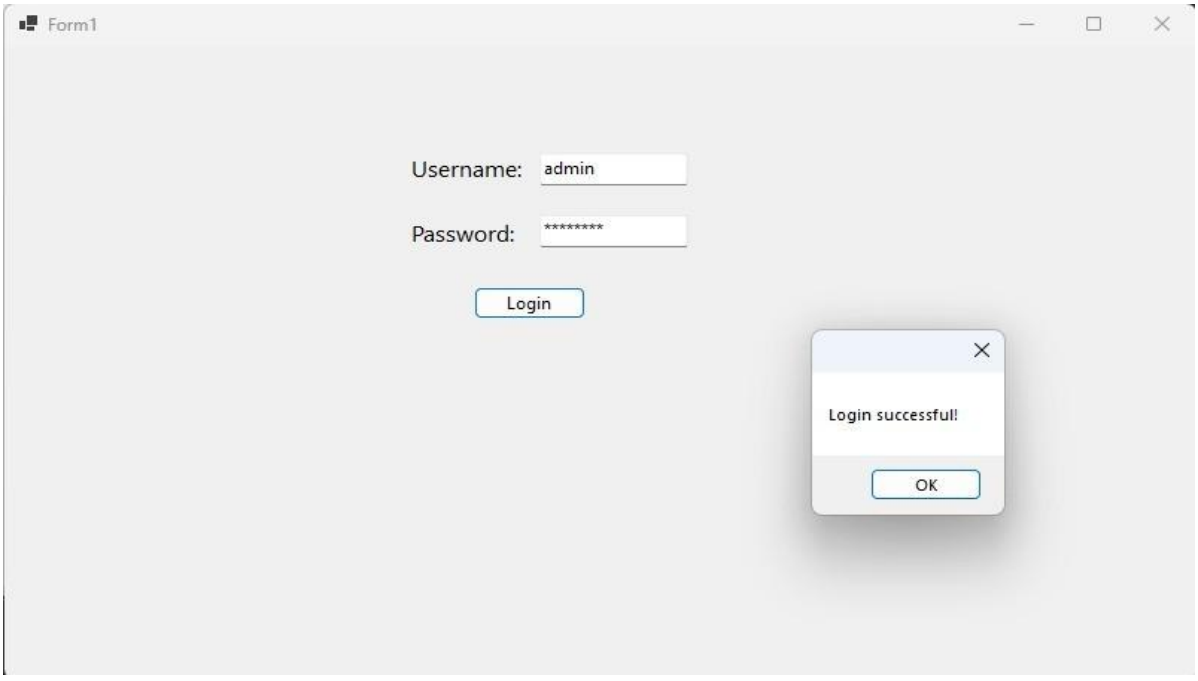

Fig 2.2 — Runtime output showing user details in MessageBox

Program 3: Write a Program on Login form using controls.

```
Public Class Form1
Private Sub btnLogin_Click(sender As Object, e As EventArgs) Handles
btnLogin.Click
If txtUser.Text = "admin" And txtPass.Text = "password" Then
MessageBox.Show("Login successful!")
Else
MessageBox.Show("Invalid username or password.")
End If
End Sub
End Class
```

Output:

Program 4: Design a simple calculator using VB.NET.

```
Public Class Form1

Private Sub btnAdd_Click(sender As Object, e As EventArgs) Handles btnAdd.Click
Dim num1 As Double = CDbl(txtNum1.Text)
Dim num2 As Double = CDbl(txtNum2.Text)
Dim result As Double = num1 + num2
lblResult.Text = "Result: " & result.ToString()
End Sub

Private Sub btnSub_Click(sender As Object, e As EventArgs) Handles btnSub.Click
Dim num1 As Double = CDbl(txtNum1.Text)
Dim num2 As Double = CDbl(txtNum2.Text)
Dim result As Double = num1 - num2
lblResult.Text = "Result: " & result.ToString()
End Sub

Private Sub btnMult_Click(sender As Object, e As EventArgs) Handles
btnMult.Click
Dim num1 As Double = CDbl(txtNum1.Text)
Dim num2 As Double = CDbl(txtNum2.Text)
Dim result As Double = num1 * num2
lblResult.Text = "Result: " & result.ToString()
End Sub

Private Sub btnDiv_Click(sender As Object, e As EventArgs) Handles btnDiv.Click
Dim num1 As Double = CDbl(txtNum1.Text)
Dim num2 As Double = CDbl(txtNum2.Text)
Dim result As Double = num1 / num2
lblResult.Text = "Result: " & result.ToString()
End Sub

Private Sub btnReset_Click(sender As Object, e As EventArgs) Handles
btnReset.Click
txtNum1.Clear()
txtNum2.Clear()
lblResult.Text = "Enter Numbers To see Result"
End Sub
End Class
```

Output:

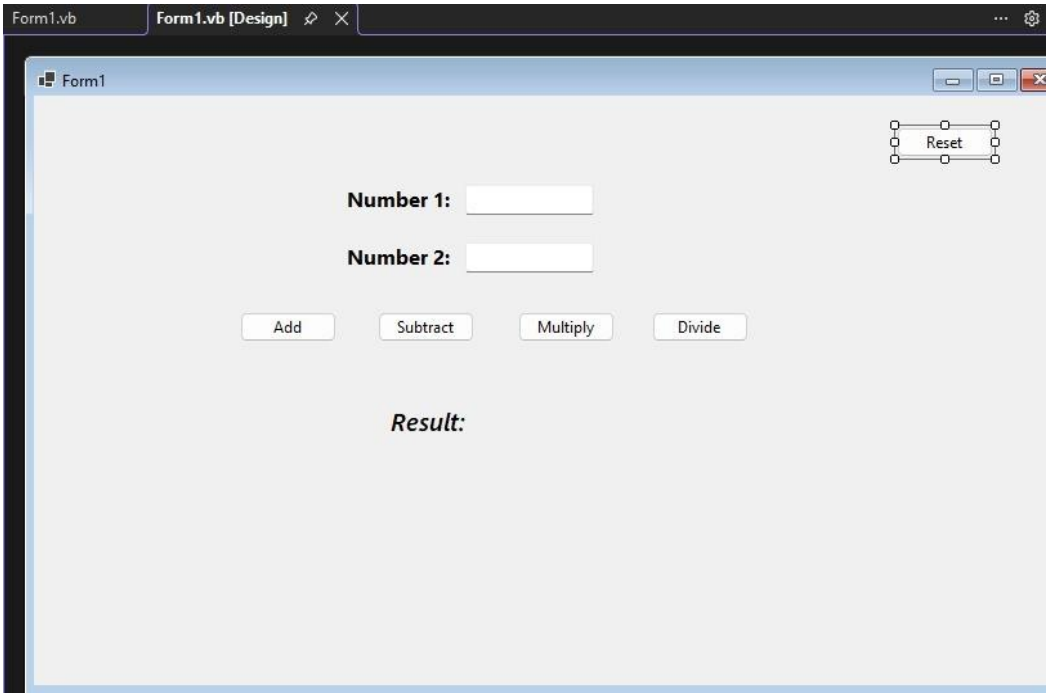

Fig 4.1 — Calculator form design in Visual Studio

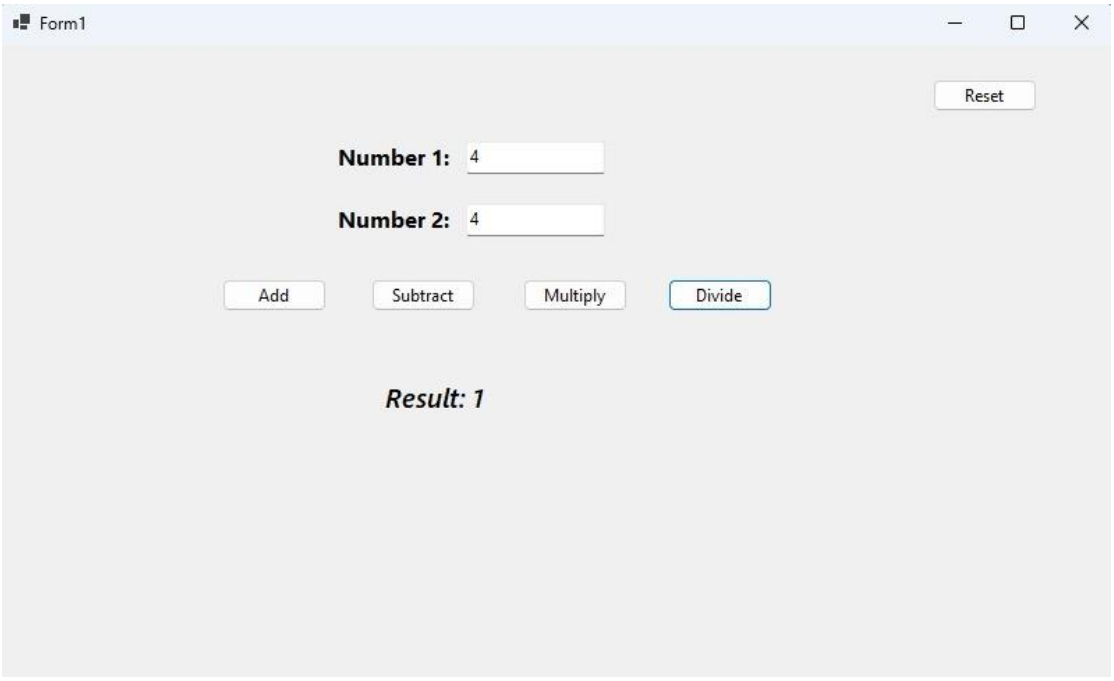

Fig 4.2 — Division operation (4 ÷ 4 = 1)

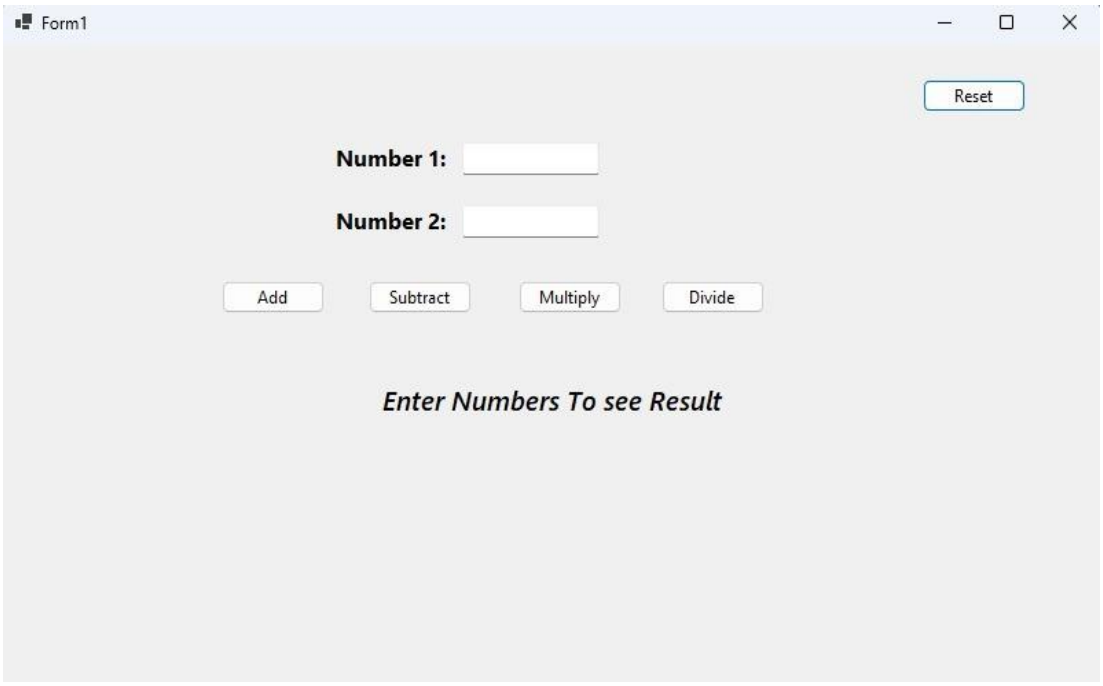

Fig 4.3 — Calculator in reset state

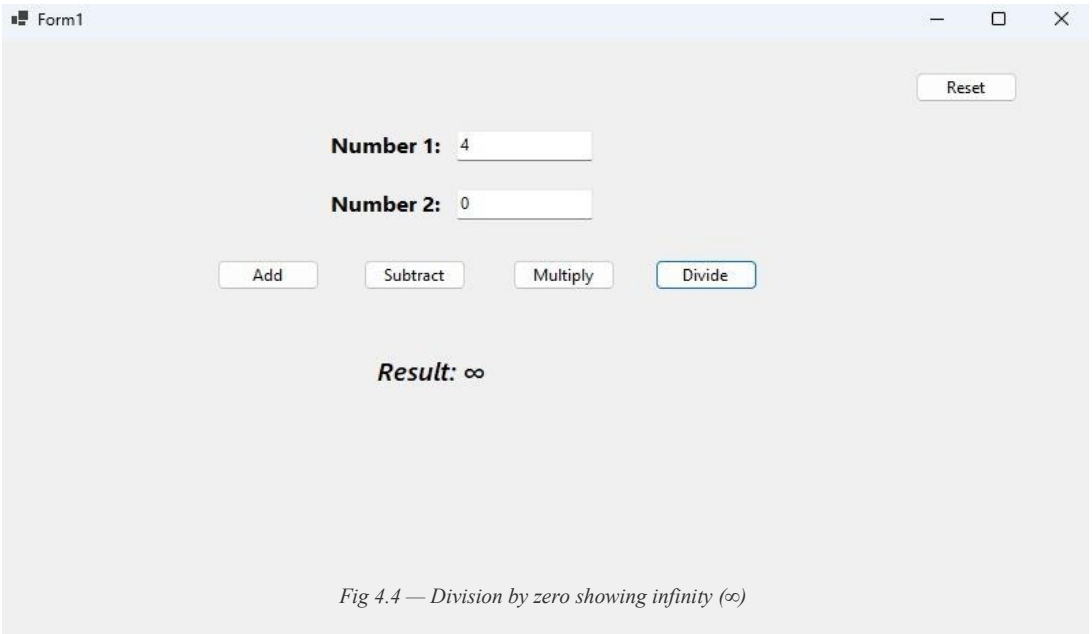

Fig 4.4 — Division by zero showing infinity (∞)
